

Peritoneal carcinomatosis index.

Completeness of Cytoreduction

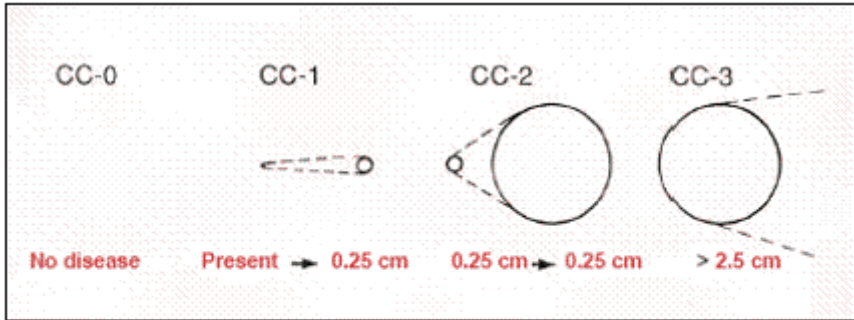

Figure 7: Completeness of Cytoreduction Score—A completeness of cytoreduction score of zero (CC-0) indicates that no peritoneal seeding occurred during the complete exploration. A CC-1 score indicates that tumor nodules persisting after cytoreduction are smaller than 2.5 mm. A CC-2 score indicates residual tumor nodules between 2.5 mm and 2.5 cm in size. A CC-3 score indicates residual tumor nodules greater than 2.5 cm or a confluence of unresectable tumor nodules at any site within the abdomen or pelvis.
